EDUCATION

B.Tech in Computer Science & Engineering

Kazi Nazrul University, Asansol 2024 – 2028 | CGPA: 7.8/10 (After 1st year)

TECHNICAL SKILLS

- **Programming:** Python, C, C++
- **Database:** SQL
- **Data Science:** NumPy, Pandas, Matplotlib, Seaborn, Data Cleaning, EDA, Feature Engineering
- **Machine Learning:** Linear/Logistic Regression, KNN, Decision Trees, Random Forest, SVM, Model Evaluation, Cross-Validation
- **Deep Learning:** ANN, TensorFlow, Keras
- **NLP:** Text Preprocessing, Tokenization, Vectorization
- **Tools/VCS:** Git, GitHub, Jupyter Notebook, VS Code

PROJECTS

FraudShield AI | End-to-End SMS Spam Detection System

([GitHub](#) | [Live Demo](#))

- Built an **end-to-end NLP pipeline** for SMS spam detection, covering **data preprocessing, feature engineering, model training, evaluation, and deployment**.
- Applied **NLTK preprocessing, Word2Vec embeddings, and SMOTE resampling** to improve text classification performance on imbalanced data.
- Trained and compared multiple machine learning models (**Logistic Regression, Random Forest, Gradient Boosting, AdaBoost, Decision Tree, KNN**) using **Precision, Recall, and F1-score metrics**.
- **Developed and deployed a Streamlit web application** for real-time SMS classification with a modular, production-style architecture.

SafeLink Inspector | Phishing Detection System

([GitHub](#) | [Live Demo](#))

- Built a **machine learning-powered phishing detection system** that analyzes URLs and webpage content to classify websites as legitimate or phishing.
- Developed **automated feature extraction pipelines using URL and webpage characteristics, generating 30+ security-related features** for prediction.
- Designed and **deployed an interactive Streamlit web application** for real-time website threat analysis and phishing detection.
- Implemented a modular architecture with model integration, logging, exception handling, and validation workflows to improve maintainability and reliability.

Bank Customer Retention Predictor

([GitHub](#) | [Live Demo](#))

- Built a **deep learning-based customer churn prediction system** using TensorFlow and Keras to identify customers at risk of leaving the bank.
- Performed **data preprocessing, feature encoding, and model training** on customer demographic and banking behavior data.
- **Designed and trained an Artificial Neural Network (ANN)** using dense layers, ReLU activation, and binary classification for churn prediction.
- Developed and **deployed an interactive Streamlit web application** for real-time customer retention prediction.

CERTIFICATIONS & TRAINING

- **Complete Machine Learning & Data Science Bootcamp (ML, NLP, MLOps)** Udemy | Jun 2025 – Feb 2026 ([view certificate](#))
- **SQL for Data Analysis** –Simplilearn, 2026 ([View Certification](#))
